Medical Lake, WA

Objective

Dedicated and adaptable educator and leader with diverse experience across STEM education, healthcare, and workforce settings. Having completed a Master of Science in Management and Leadership and currently pursuing a Doctorate in Strategic Leadership, I bring a unique blend of teaching expertise, institutional insight, and academic preparation. My work centers on helping students, professionals, and organizations bridge leadership theory with hands-on practice. In addition to serving vulnerable populations such as those in healthcare, education, and correctional systems, I am passionate about partnering with small business owners and local leaders—helping them adopt values-based leadership practices and leverage emerging AI tools to improve efficiency, decision-making, and long-term growth. My goal is to prepare and support future leaders who can transform organizational culture, strengthen communities, and improve lives through innovation and principled leadership.
